- **Registration Number :** 25BCE10756
- **Branch :** Computer Science (Core)
- **Year:** 2025-2029
- **Course Code :** CSE0001
- **Course Title :** Digital Literacy
- **Date:** 31 March 2026

• *INTRODUCTION*

In today’s digital world, having basic digital literacy skills is essential for students. This project was designed to help us understand how to use digital tools effectively, communicate professionally, and stay safe online.
As part of this assignment, I worked on multiple tasks including creating an infographic, building a digital portfolio, exploring online platforms, learning email etiquette, and studying cybercrime awareness. Through these activities, I gained practical knowledge about how digital platforms are used in academics and professional environments

• *Task 1 Write Up*

1. **Overview**

I have made a digital literacy infographic using canva which discusses topics like what is digital literacy , not just its meaning but its deeper understanding , useful digital tools for students along with what they can be used for ,safe internet practices for youth and the importance of professional online presence alog with tips to maintain it .

2.**Tools and Technology Used**

This infographic is made using canva which is a graphic design platform which is widely used for its intuitive interface and vast asset library.I have used custom Color Palettes to maintain a professional green-themed aesthetic and the alignment and grouping tools were essential for ensuring a balanced flow between text and imagery.

3.Reflections

One interesting aspect of this project was the challenge of Information Hierarchy. It was difficult to decide which details to include without cluttering the canvas. However, I found the process of 'visual storytelling' fascinating—specifically how choosing the right icon can replace a whole sentence of text, making the final product much more engaging than a standard report.

- ***Task 2 Write Up***

For this task i created accounts on various platforms such as GitHub , Linkden and Kaggle . All three of them are digital performs used to build networks , help improve our skills , showcase them and connect with people of like intersests.

I updated my profiles with basic academic details and created a simple Readme file on Github. This task helped me understand the importance of maintaining a professional digital presence.

For the next four years of my academic journey i plan to use github to showcase my talent and improvise my coding , Linkden to build meaningful connections and demonstrate my achievements and kaggle to learn more about my field .

- ***Task 3 Write Up***

In task three i used platforms such as hacckerrank and google forms . On hacckerank i participated in some basic contest and solved some basic coding problems of python language which helped me understand basic problem-solving.

On google forms I created a digital literacy awareness quiz where i framed questions related to digital literacy that check the deeper knowledge of people about digital literacy , i also added some questions that i related to real life situations This helped me learn how to design questions and collect responses.

These tools will be useful in academics for practising coding and conducting surveys or quizzes.

- ## *Task 4 Write Up*

Through this task i learned the importance of proper communication etiquette and how to write professional emails and follow proper communication etiquette where I drafted emails for requesting an assignment extension and applying for an internship.

One such incedent happened with me where i drafted a mail to my classteacher in order to recheck my marks for the annual examination and in the end i wrote “Please reply back asap” with is completely wrong and inappropriate , next day teacher read my email aloud in the entire classroom and scolded me .

This task showed how poor communication can create misunderstandings and how using a polite and clear tone can improve interactions

- ## *Task 5 Write Up*

While working on the cybercrime case study, I was surprised by how easily people can fall for scams like phishing and online fraud. These attacks often appear genuine and create urgency.

This task made me realize the importance of being careful while sharing personal or financial information online. One habit I will change is verifying links and messages before taking any action.

- ## *Conclusion*

This task helped me understand the importance of digital presence. I realized that platforms like GitHub and LinkedIn are not just for professionals but also for students to showcase their skills and growth over time.I learned how to use digital tools, communicate professionally, and stay safe online.

These skills will be useful throughout my academic journey and future career. Overall, this project improved my awareness and confidence in using digital platforms responsibly.
